

Packaging

"No stack" cone signals that items should not be stacked on top of the carton by transit company.

All corners and edges are protected with corrugated, shock-absorbent inner packaging. This creates an air-cushioned gap to prevent shipment damage. The outer carton is constructed of grade 48 ECT corrugate.

Prominent barcodes and content labels offer peace of mind throughout the shipping process.

Durable strapping secures each unit to a custom-sized pallet.

All pallets are sized to fit to prevent cabinet overhang and eliminate shifting during shipping.
